

Attachment #3 – Coordinated Entry Assessment Tool

In this zip file, there are 5 Coordinated Entry tools:

Step 1: Pre Screen Form

This is the first document used in CE. It collects basic information & serves as a consent form for participants agreeing to be referred to the prioritization list.

Step 2: Assessment

If the participant is homeless, one of three assessments is completed based on household type & age.

- If the household does not have children & the participants are 25 years old or older, the VI-SPDAT 2.0 assessment will be used.
- If the household does not have children & the participants are under the age of 25, the TAY-VI-SPDAT 1.0 assessment will be used.
- If the household has children, the VI-F-SPDAT 2.0 assessment will be used.

If the participant is not homeless, but at risk of homelessness, the WIBOSCOC Prevention Assessment is completed.
